Percentage of N.C. Parents Who Report That They Have Talked To Their Child (Ages 12 to 17 Years) About Reducing His or Her Chances of Getting HIV and STDs, by Child's Age Group

Percentage of N.C. Parents Who Report That They Have Talked To Their Child (Ages 12 to 17 Years) About Reducing His or Her Chances of Getting HIV and STDs, by Parent's Education Level

The North Carolina Child Health Assessment and Monitoring Program (NC CHAMP) is a surveillance system that collects information about the health characteristics of children from age 0 to 17 years. NC CHAMP is a follow-up survey of the Behavioral Risk Factor Surveillance System (BRFSS) which is a telephone survey of adults, ages 18 and older. All adult respondents with children living in their household are invited to participate in the CHAMP survey. One child is randomly selected from the household and the adult most knowledgeable about the health of the selected child is interviewed in a follow-up survey. This surveillance update includes data collected in 2007 on 1,050 parental surveys of children ages 12 to 17. Results presented here are for parents who responded "yes" to the question: "Have you discussed with your child about reducing his/her chances of getting HIV and STDs (sexually transmitted diseases)?" Percentages are weighted to population characteristics. For further information about NC CHAMP, please visit www.schs.state.nc.us/SCHS/champ.
